FinTab

In the competitive world of financial services, the senior management must make informed decisions every day to efficiently run the day to day operations. Such decisions require many data points to be taken into consideration. Any omissions or delay in information can lead to bad decisions or indecisions, leading to revenue loss or higher costs.

This is where the mobile based **FinTab** saves the day.

FinTab app provides multiple management dashboards, with simple to operate UI visual charts supported by tabular data. Real-time data, up to the bank's branch level, can be viewed on bank's products, financial parameters, branch and ATM details, deposits and loans, turnovers, delinquent loans and recoveries, alerts, notifications and much more. Everything required by the decision makers to improve bank's efficiency is now available at the fingertips of the decision makers through the mobile app **FinTab.**

The data from the Core Banking System seamlessly integrates with **FinTab** app on real time basis or from last close of business day. The backend of the application can be deployed on-site or cloud.

Being a pioneer in the banking industry, we understand that the bank executives are extremely busy and hard pressed for time. Hence, we have made the application extremely simple and user friendly to quickly get to the required information.
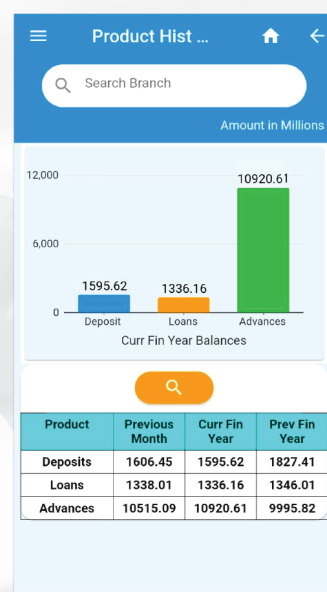

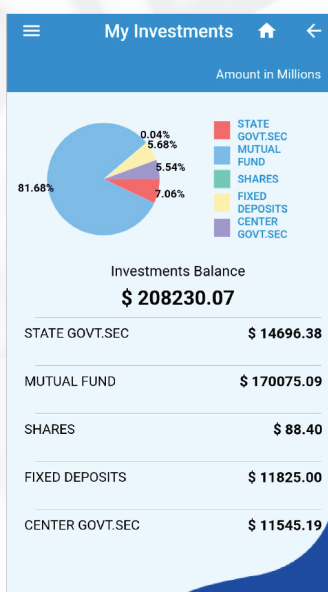

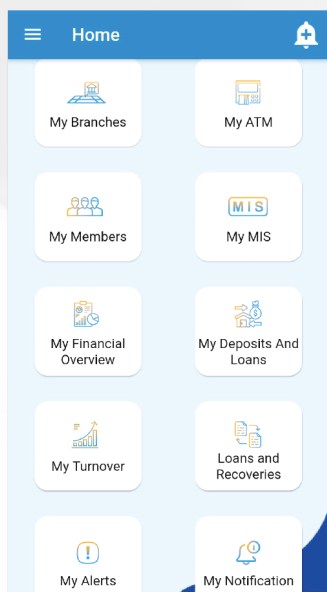

KEY FEATURES
