DataVision Implements FinNext Core Banking Solution at FlexiSoluciones, Mexico

Mexico City, 15th March 2023: DataVision Incorporation (DataVision) and Technological Financial FlexiSoluciones, are pleased to announce the selection of FinNext core banking system by DataVision, a worldwide provider of banking solutions. The project includes replacing a local home-grown solution by best of breed, FinNext. The implementation will take approximately 3 months to complete and will be live in Mexico.

"The challenge was to develop a system that would fulfill the needs of FlexiSoluciones and be within their budget. We were able to show the bank's management team the highly parametrized nature of the product fulfils their requirements. The project will be done using DataVision's unique implementation methodology to have a mixed team of onsite and offshore resources to keep the cost down. Said Ameet Uchil, our Founder of DataVision Group: "This was a team effort between DataVision and the FlexiSoluciones to achieve complete success."

Alfonso Salazar, President at FlexiSoluciones, commented, "We selected DataVision for our Core Banking project because of their banking knowledge and FinNext product. Their banking experts were able to show us how our products would look in FinNext and the ease of use by our back-office team in processing loans. This will enable us to grow and bring new products into the market much faster."

About Technological Financial FlexiSoluciones

FlexiSoluciones is a dynamic Financial Institution which has been disrupting the credit market in Mexico. They design the only credit with mortgage guaranty for immediate liquidity, which allows the customers to access an advance with a grace period and multi-draws. The Institution's unique methodology allows to configure custom credit solutions to grow the business.
